

I have been a subscriber of XM's service for 8 months and it is the greatest thing to happen in the entertainment market since CDs. The content is great and worth every cent. I have a choice on my radio to listen to local information and should not be limited by an Association to where I get local information. Let the competitive markets work. It is the best thing for consumers. XM does not offer local weather and traffic yet in Charlotte, but I am hopeful they will. They should not be limited to offering it if it makes good business sense for them. If it is good, I would even pay for it. I do not think the FCC should support the NAG's petition 04-160. Thank you.
